

What is claimed is:

1. A print apparatus, comprising:

a display unit;

an interface adapted to communicate with a host device; and

5 a control unit for determining whether certain language information from the host device has been received through the interface, and, if it is determined that the language information has been received, displaying display information on the display unit in a language corresponding to the language information.

10 2. The print apparatus as claimed in claim 1, wherein the language information is display language information of a device driver set when the device driver is installed in the host device to control operation of the print apparatus.

15 3. The print apparatus as claimed in claim 1, wherein the information to be displayed on the display unit includes menu information, option information, and message information displaying an operational status of the print apparatus which are set in the print apparatus.

20 4. An automatic display language setting method for a print apparatus connected to a host device through a communication interface and communicating with the host device through the communication interface, comprising steps of:

determining whether certain language information has been received through the communication interface from the host device; and

25 setting up a display language of a print apparatus to display information to be displayed on a display unit of the print apparatus in a language corresponding to the language information if it is determined that the language information is received from the host device.

30 5. The automatic display language setting method as claimed in claim 4, wherein the language information received from the host device is display language information of a device driver which is set when the device driver for controlling operation of the print apparatus is set up in the host device.

6. The automatic display language setting method as claimed in claim 4, wherein the print apparatus includes a facsimile machine, a printer, and a combination device providing functions of the facsimile machine and the printer.

5

7. An automatic display language setting method for a print apparatus in a print system having a host device connected through the print apparatus and a communication interface, comprising:

10 sending to the print apparatus display language information of a device driver which is set when the device driver for controlling operation of the print apparatus is set up in the host device;

determining whether the display language information of the device driver has been received from the host device; and

15 setting up a display language of the print apparatus to display information to be displayed on a display unit of the print apparatus in a language corresponding to the display language information of the device driver, if it is determined that the display language information of the device driver has been received from the host device,.

20 8. The automatic display language setting method as claimed in claim 7, wherein the sending step comprises:

setting up the device driver in a memory of the host device if an installation command for the device driver has been received;

selecting the display language of the device driver; and

25 sending to the print apparatus the display language information of the device driver to set up the display language of the print apparatus in the same language as the display language of the device driver.

30 9. The automatic display language setting method as claimed in claim 7, wherein the print apparatus includes a facsimile, a printer, and a combination device providing functions of the facsimile and the printer.
